

Omobolaji Adeyan

Security Engineer · OWASP & OpenSSF Contributor · Founder, FreNiMi

Crest Hill, Illinois, USA · omobolaji.adeyan@gmail.com · +1 (779) 939-5929 · [linkedin.com/in/oadeyan](https://www.linkedin.com/in/oadeyan) · github.com/omobolajiadeyan

CISA-certified security engineer and founder of FreNiMi, a security-first product studio. Ten-plus years advising organizations internationally as an HR consultant before formally pivoting into technology — that background now shapes a security practice built on reading behavior and risk, not just code. Active open-source contributor with merged patches into OWASP, OpenSSF, and other recognized security projects.

CERTIFICATIONS

CISA — Certified Information Systems Auditor (ISACA), 2024

CompTIA Security+ ce, 2024

AWS Academy Cloud Foundations, 2024

EXPERIENCE

Founder & Security Engineer — FreNiMi

2026 — Present

- Founded and lead a product studio building security-first digital products across AI security, health technology, public-sector security, games, and marketplaces.
- Shipped PhishGuard AI, an explainable offline phishing-detection engine published as a reusable GitHub Action on GitHub Marketplace, plus GovGard/GovWatch (public-sector security tooling) and FreNiMi Health.
- Built and maintain five independent open-source security tools: BehaviorSense (insider-threat/UEBA detection), VulnGPT (AI-assisted CVE remediation), CVE Dashboard, Secrets Scanner, and Log Analyzer.

HR Consultant

10+ years

- Advised organizations internationally on people operations, risk identification, and behavioral pattern analysis.
- Built the behavioral and risk-reading instincts that now directly inform security work — particularly insider-threat and anomaly-detection design.

OPEN-SOURCE CONTRIBUTIONS & RECOGNITION

- **OWASP Agent Security Regression Harness** — merged PR adding recursive scenario validation for files, directories, and globs.
- **OWASP cve-lite-cli** — merged PR adding risk and next-action guidance to reports.
- **OpenSSF Scorecard** — contributed a fix extending the Dangerous Workflow check to detect committer-context script-injection risk.
- **RamenDR ramencli** — merged CI hardening PR pinning GitHub Actions to commit SHAs.
- **TruFoundation TruShell** — merged PR fixing a shell-injection vulnerability and adding security regression tests.
- **SecOps-NG Framework** — merged Cyber Resilience Act compliance-mapping PR; publicly recognized by the maintainers as the framework's first external code-level contribution.

EDUCATION

BSc, Information Technology

Arizona State University

2021 – 2025

MA, Human Resource Management

University of Plymouth, England

2015 – 2016

BSc, Business Management & Operations

University of Plymouth, England

2012 – 2015

WRITING

SPF, DKIM, and DMARC in Phishing Detection — dev.to, published

From Single Files to Scenario Suites: Batch Validation in the OWASP Agent Security Regression Harness — dev.to, published
